

1 Basic Terms

Before we can begin giving notes, we need to learn some key terms that are necessary to know before solving problems in chemical kinetics.

- **Kinetics:** The rate at which chemical reactions happens. Kinetics deals with studying how fast a reaction occurs, and how much energy it takes to occur.
- **Order:** The amount of effect a substance has on the rate of a reaction
- **Rate Law:** The mathematical relationship of the concentration of reactants against the concentration of products
-
